Workshops in the form of 45 minutes meetings with an expert in the field of engineering in the following aspects: design and modeling, 3D reconstruction, BIM 4D and 5D, automation, legal issues, construction technologies, road, railway and bridge asset management.

Demonstrations of technologies and devices used in the design, construction and inspection of linear infrastructure.

Types of events

**WORKSHOP**

Workshops in the form of 45 minutes meetings with an expert in the field of engineering in the following aspects: design and modeling, 3D reconstruction, BIM 4D and 5D, automation, legal issues, construction technologies, road, railway and bridge asset management.

**PLENARY**

Presentations in the form of 10 minutes modules. After the presentations, a question and answer session up to 5 minutes is planned for every presentation.

**SHOWS**

Demonstrations of technologies and devices used in the design, construction and inspection of linear infrastructure.

Meet representatives of the largest design and construction companies, as well as road and rail administration in Central and Eastern Europe.

Discussion panel with the participation of several experts led by a moderator. Short statements on the problems of planning, construction and management of road, rail and bridge infrastructure.
Agenda

The days dedicated to roads and railways will be joined by the bridge day. Bridges are the element of infrastructure that is to connect us safely.
